HOW TO WIRE A DIRECT DRIVE COMPRESSOR GROUNDING HORN BUTTON

**FACTORY HORN BUTTON IS GROUNDED WHEN HORN
BUTTON IS DEPRESSED**

Disconnect wire(s) from factory horn under hood or in grill. Check to see if wire(s) have:

1. Constant 12 volts
2. 12 volts only when horn button pressed
3. Constant ground
4. Ground only when horn button is depressed

Note this for proper connection of the direct drive compressor.

This diagram is for wiring a 6126 or 6127 horn with direct drive compressor (P/N DD1)
